

SAAM EZOJI

Senior Software Engineer

saam.ezoji@gmail.com | +90 534 640 3281

PROFILE

Senior Software Engineer with 8+ years of experience across mobile, embedded systems, backend, and AI platforms. Proven track record of delivering production-grade systems, leading mobile development, and building high-performance, hardware-integrated solutions.

WORK EXPERIENCE

PortX (USA) — Lead Mobile Developer (2023–Present)

- Led development of 3 production Flutter apps (Driver, Customer, Equipment Tracking) used by real users in logistics operations
 - Designed scalable architecture with BLoC / MobX state management
 - Implemented CI/CD pipelines (Codemagic, Shorebird) for automated releases
 - Built real-time features: push notifications, background tasks, live tracking
 - Implemented JWT authentication, refresh tokens, error handling strategy
 - Integrated AI-powered smart chat (OpenAI APIs) for customer support
 - Used Firebase (Firestore, Remote Config / Feature Flags) for dynamic behavior
 - Collaborated on API design and backend integration
 - Published apps on App Store & Google Play
-

VTS (Verkehrstechnik Süd GmbH, Germany) — Software Engineer (Part-Time, 2024–2025)

- Extended Python-based Charging Station Management System (CSMS)
 - Worked with OCPP protocol (1.6) for charger-backend communication
 - Implemented:
 - Smart Charging Profiling
 - Advanced log handling & diagnostics
 - Performed debugging, testing, protocol-level validation
 - Gained exposure to OCPI ecosystem
-

TSCO — Android TV Platform Engineer (2018–2020)

- Built VOD Android TV application using Leanback framework
 - Customized embedded Android firmware (Allwinner) and system launcher
 - Implemented OTA firmware updates
 - Designed scalable backend with Spring Boot
 - Supported ~40K concurrent users using:
 - Load balancing
 - DB replication
 - Backup scheduling
 - Integrated third-party VOD platforms (Filimo, Namava)
 - Targeted deployment on LG & embedded TV systems
-

EBP (Ertebatat-e-Bargheh) — C++ / Embedded Engineer

Converted MATLAB communication algorithms → high-performance C++

Built low-level, near-driver systems:

- Memory management
- Multithreading / critical sections
- Lossless high-frequency data processing

Implemented socket programming (TCP, Serial, LAN)

Integrated hardware devices (tuners, antennas, spectrum analyzers)

Used ZMQ (Publisher/Subscriber) for inter-process communication

Key Projects:

Offline Signal Analyzer (Qt)

- Full-stack Qt (UI + backend)
- Demodulation & signal decoding (audio/video extraction)
- Performance optimization with Intel IPP / MKL

Radio Signal Tools

- AM/FM modulation modules
-

Projects

EasyCard (Dubai)

- Built React Native app (iOS & Android) → Published
- Developed Android POS app
- Implemented low-level NFC handling (NXP SDK)

Nurse Intelligence Program

- React Native + .NET backend
- Healthcare shift management system

Smart Water System

- Python Flask + Raspberry Pi
- Designed SMS-based communication protocol
- Built custom message parsing & broker logic

Broadcast Switching System

- Flask + Raspberry Pi
- Controlled hardware via serial communication

AI Digital Marketing Platform

- Python + React + PostgreSQL + Redis + Redshift
- Features:
 - Lead generation (Brave / Google APIs)
 - Lead segmentation
 - Content generation & publishing
 - Social media analytics
 - CRM email automation

CSMS Backend (Startup – Ongoing)

- Built full Charging Station Backend (OCPP 1.6)
- Features:
 - Smart charging
 - Remote control (start/stop)
 - Load management
 - Diagnostics & firmware updates
- Planned OCPI → eMSP integration

Affiliate Marketing AI System

- Python Flask + MySQL
 - AI-based automation (OpenAI, Gemini)
 - Social media publishing + analytics + feedback loop
-

EDUCATION

B.Sc. in Software Engineering

2011 – 2015

University of Science and Technology of
Mazandaran

CERTIFICATIONS

- Azure IOT Hub - Coursera(2023)
- React Native - Coursera(2023)

LANGUAGES

- English (Fluent)
- German (Intermediate)
- Italian (Basic)
- French (Basic)
- Turkish (Intermediate)

SKILLS

Languages:

- C++, Python, Dart, Java/Kotlin, JavaScript

Frameworks:

- Flutter, React Native, Flask, Spring Boot

Systems:

- Embedded Systems, Distributed Systems, CI/CD

Protocols:

- OCPP, OCPI, ZMQ, TCP/Serial, NFC, SMS-based systems

Databases:

- PostgreSQL, MySQL, Redis, Firebase, Redshift

AI:

- OpenAI, Gemini APIs
